## DJ Site

---

For this assignment I decided to build a site for my best friend. I figured this would be a good opportunity to do since he's been asking me to build one for him for a long time. He's a Disc Jockey based in Atlanta. My design is simple and clean. Please keep in mind that I was more focused on meeting the requirements of this site. In order for me to launch this site I would have to add a lot more to it. Below is an explanation of the requirements.

### Requirements:

Home Page: index.html

jQuery: I used Unslider at top of all the pages and I also used Lightbox for my gallery on the gallery.html page.

Data Visualization: I used on the about.html page. I used a map to show what cities my client has djed at in the past.

HTML 5 Audio: I used the audio tag on the mixes.html page. I took a few seconds from two mixes he made and created a small audio file for the purpose of this project.

HTML Canvas: I used the canvas to create a graphic on the Contact.html page.

Modernizr: I used modernizer on the contact page to check for canvas.

All of the photos belong to my client.
