Presentation Assignment

I researched a few different Javascript libraries and JQuery plugins. I originally selected the JQuery lightGallery plugin, but then I came across Unslider decided to go with that one. I actually began to work on my presentation and felt it was too similar to LightBox so that was part of my reason to switch.

Unslider is a JQuery slider that is lightweight and easy to use. It's less than 3kb and is responsive, works with all the latest browsers as well as older ones. It is customizable and images adjust to fit the slider.

I think this is a great plugin to use in all type of sites, especially photography and ecommerce sites. This slide is works well as a call to action too.
